

Alt Mobility Data Analyst Assignment: Summary of Findings

1. Key Insights from SQL Queries

- Total Orders: 15,000
- Unique Customers: 7,334
- Repeat Customers: 4,402 (~60%)
- Orders with Completed Payments: 4,267 (28.45%)
- Orders with Failed Payments: 4,263 (28.42%)
- Total Revenue (Completed Payments): ■12.57 Lakhs
- Revenue Lost (Failed Payments): ■12.73 Lakhs

2. Customer Retention Analysis

The cohort analysis visualizes how many customers, grouped by their first order month (cohort), made repeat purchases in subsequent months. Each row represents a cohort and each column shows the percentage of that cohort who placed an order in the given month.

Insights from Power BI Cohort Matrix:

- Retention drops after the first year across most cohorts.
- 2020 and 2021 cohorts show solid multi-year engagement.
- Recent cohorts (2023–2024) are showing early promise and should be targeted for loyalty building.

3. Recommendations for Alt Mobility

- Address the high payment failure rate, especially for credit card and PayPal users.
- Create targeted re-engagement campaigns at the 2nd and 3rd month post-first-order.
- Incentivize repeat orders through loyalty programs or reminders around peak retention months.
- Analyze high-retention cohorts (e.g., 2020–2021) for patterns that can be replicated.
